                                                                                        The present invention relates to a method of prognosticating metastasis in a breast cancer patient involves identifying differential modulation of each gene relative to the expression of the same genes in a normal population in combination of genes. The invention is useful for prognosticating breast cancer in a patient. The present sequence is huma STEAP (six transmembrane epithelial antigen of the prostate) DNA used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human STEAP

The method comprising identifying differential modulation of each gene (relative to the expression of the same genes in a normal population) in a combination of genes. The method, diagnostic portfolio and the kit are useful in diagnosing cancer. The method may also be used for determining gene expression profiles. The present sequence is human STEAP (six transmembrane epithelial antigen of the prostate) DNA used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Diagnosing cancer comprises identifying differential modulation gene (relative to the expression of the same genes in a normal population) in a combination of genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 4; Page 54-55; Opp; English

         The invention relates to human prostate-specific polypeptides and the polynucleotides encoding them. The invention also relates to an isolated antibody or its antigen-binding fragment that specifically binds a polypeptide of the invention, a method of detecting cancer in a patient comprising contacting a biological sample of the patient with an agent that binds a prostate-specific polypeptide and comparing the amount of bound polypeptide compared to a predetermined cut-off value and a fusion protein comprising a prostate-specific polypeptide. The sequences of the invention are used to diagnose and treat cancer, particularly prostate cancer. This sequence represents cDNA encoding a human prostate-specific polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    whose expression is upregulated or downregulated in specific cancers or cother diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a content by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a concleic acid of the invention; antibodies which specifically bind a conjugative of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the collection and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistation syndromes, scarring and uterine fibroids. They may calso be useful in wound healing and in contraception. The present contraception is not an uncleic acid sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 1195;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods confetermining the presence or absence of a pathological cell in a cc patient by detecting a nucleic acid at least 80% identical to those of convention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a cc polypeptide of the invention; antibodies which specifically bind a cc polypeptide of the invention; antibodies which specifically bind a cc polypeptide of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the collect acids. The nucleic acids, polypeptides, cc antibodies and methods are useful for diagnosing, prognosing and treating cc cancer and other conditions such as psoriasis, ischaemia, heart disease, catherosclerosis, inflammatory diseases, autoimmune diseases, retinal cc also be useful in wound healing and in contraception. The present cc sequence represents a nucleic acid sequence of the invention.

The invention relates to a method of selecting a portfolio of markers (C (e.g., genes) for use in a diagnostic application. The method involves: (a) defining diagnostic parameters; (b) establishing a relationship among the diagnostic parameters so that they are optimised; and (c) selecting the diagnostic parameters so that they are optimised; and (c) selecting the optimal group of markers (the portfolio) for the diagnostic c application. The diagnostic parameters can include a measure of the relation in the measurement of the degree of gene, a measure of the variation in the measurement of the degree of gene expression, and the relationship relative degree the diagnostic parameters can be a mean comparison that the relationship determines the relationship. The method further comprises the application of a heuristic rule. The invention also relates to a general-purpose computer programmed to identify a portfolio of markers, instructions for comprising genes selected according to the method. The method of the computer programmed to identify a portfolio of markers, instructions for determining gene succession. The method of the method of the compression of relevant cells as well as protein-based methods of the expression of relevant cells as well as protein-based methods of compensation of multiple genes (e.g., breast, prostate, ovarian, cc colorectal or lung cancer). By grouping these markers into portfolios, the most reliable results can be obtained with the smallest number of markers necessary to obtain such a result, which is particularly component sequence represents a human diagnostic marker gene that is a member of an optimised portfolio of 31 genes for screening for prostate, breast, colon, ovarian and lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Selecting a portfolio of markers useful in diagnostic applications comprises defining diagnostic parameters and establishing a relationship among the diagnostic parameters that identifies an optimized portfolio of markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of human tumour-associated antigenic target (TAT) polynucleotide and polypeptide sequences. Also disclosed is an antibody that binds to a TAT polypeptide. The antibody is a monoclonal antibody, an antibody fragment, a chimeric antibody or a humanised antibody. It is conjugated to a growth inhibitory agent. It is produced in bacteria or in CHO cells and induces death of a cell to which it binds. The antibody is useful for preparing a composition for diagnosing or treating tumours and cancer. The present sequence represents a human TAT cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; SEQ ID NO

                                                                                                                                                                      180
                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                              60
                 300
                                               300
Sequence 1, Application US/10010667A

Patent No. 6887975

GENERAL INFORMATION:

APPLICANT: Afar, Daniel

APPLICANT: Hubert, Rene S.

APPLICANT: Leong, Kahan

APPLICANT: Raitano, Arthur B.

APPLICANT: Raitano, Douglas C.

APPLICANT: Mitchell, Steve Chappell

TITLE OF INVENTION: NOVEL SERPENTINE TH
                                                                                                                                                    RESULT 5
US-10-010-667A-1
                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                     В
